NAGA ADITHYA

ARCHITECTURAL DESIGN INTERN

I am a fourth-year architecture student at Jindal School of Art and Architecture. Through my studio work I have come to understand that a building is supposed to be designed for and around the User, how they move through a space, where they pause, what they need without asking for it. My projects have pushed me to think about terrain, climate, and material not as constraints but as the starting point, and to understand that the most honest design decisions often come from looking at what is already there on and around a site rather than bringing everything in from far out. I want to keep building on that, designing spaces that are responsive, resource-aware, and shaped around the people who will actually live and work in them.

SKILLS

3+ Years Of Experience

AutoCAD
Sketchup
Twinmotion
Affinity Photo
Affinity Designer
Affinity Publisher

Construction Documentation
BOQ Preparation
Material Specification
Construction Drawings

0-1 Years Of Experience

Rhino
Enscape
Photoshop
D5 Render
Affinity by Canva

INTERESTS/ HOBBIES

Photography
Videography
Documentaries

Travelling
History
Documentation

LANGUAGES

English
Telugu
Hindi

EXPERIENCE

Architectural Intern at Configoo Spaces
June 2025 - July 2025
Softwares Used : AutoCAD, SketchUp, Twinmotion, Enscape, Affinity Photo.

Worked across residential, commercial, and theatre interior projects, contributing to design development, 3D visualization, and construction documentation. What I took away most from this internship was how differently design has to think at different scales and for different users. Moving between a villa, a clubhouse, and a commercial mall within the same period pushed me to understand that the brief changes everything — the way space is planned, how people are expected to move through it, what the design actually needs to do.

Architectural Intern at Archi Wing Studio
June 2024 - July 2024
Softwares Used : AutoCAD, SketchUp, Twinmotion, Affinity Photo, Affinity Designer.

Worked on residential apartment projects with a focus on elevation design, layout planning, material research, and BOQ preparation. This was where I first understood the relationship between a design decision and what it actually costs to build, that choosing a material or a dimension is never just a visual choice. It made me realise that a good drawing means very little if it cannot actually be built within the reality of a site and a budget.
